Legacy JavaScript — Est savings of 14 KiB

Polyfills and transforms enable older browsers to use new JavaScript features. However, many aren't necessary for modern browsers. Consider modifying your JavaScript build process to not transpile Baseline features, unless you know you must support older browsers. Learn why most sites can deploy ES6+ code without transpiling LCP FCP Unscored

Forced reflow

A forced reflow occurs when JavaScript queries geometric properties (such as `offsetWidth`) after styles have been invalidated by a change to the DOM state. This can result in poor performance. Learn more about forced reflows and possible mitigations. Unscored

LCP request discovery

Optimize LCP by making the LCP image discoverable from the HTML immediately, and avoiding lazy-loading LCP Unscored

- LCP resources should not use loading=lazy
- fetchpriority=high should be applied to the image preload request
- Request is discoverable in initial document

Preconnected origins

preconnect hints help the browser establish a connection earlier in the page load, saving time when the first request for that origin is made. The following are the origins that the page preconnected to.

Origin	Source
https://fonts.googleapis.com/	head > link <link rel="preconnect" href="https://fonts.googleapis.com">
https://fonts.gstatic.com/	head > link <link rel="preconnect" href="https://fonts.gstatic.com" crossorigin="anonymous">

Unused preconnect. Only use `preconnect` for origins that the page is likely to request.

Preconnect candidates

Add preconnect hints to your most important origins, but try to use no more than 4.

No additional origins are good candidates for preconnecting
